3 Safety Instruction

Please read the following safety notices before installing or using this unit. They are crucial for the safe and reliable operation of the device.

- Please use the product-specified power adapter. If you need to use a power adapter provided by another manufacturer due to special circumstances, please confirm that the voltage and current of the provided adapter meet the specifications of this product, and it is recommended to use a product that has passed safety certification, otherwise it may cause fire or electric shock accidents. When using this product, do not damage the power cord, do not twist, stretch and strap it, and do not press it under heavy objects or sandwich between items, otherwise it may cause fire or electric shock caused by broken power cord.
- Before using the external power supply in the package, please check the home power voltage. Inaccurate power voltage may cause fire and damage.
- Please do not damage the power cord. If power cord or plug is impaired, do not use it because it may cause fire or electric shock.
- Do not drop, knock or shake the phone. Rough handling can break internal circuit boards.
- Before using the product, please confirm that the temperature and humidity of the environment meet the working requirements of the product.
- Avoid wetting the unit with any liquid.
- Do not attempt to open it. Non-expert handling of the device could damage it. Consult your authorized dealer for help, or else it may cause fire, electric shock and breakdown.
- Do not use harsh chemicals, cleaning solvents, or strong detergents to clean it. Wipe it with
 a soft cloth that has been slightly dampened in a mild soap and water solution.
- When lightning, do not touch power plug, it may cause an electric shock.
- Do not install this phone in an ill-ventilated place. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

4 Overview

Y501/Y501-Y/Y501W/Y501W-Y is a SIP mini medical bedside intercom product developed specifically for the needs of users in the medical and nursing industry, with a compact and stylish appearance and powerful functions, supporting the use with wireless keys for emergency dialing and playing music operation. Intelligent security, audio/video intercom and broadcasting functions in one, cost-effective. Support 86 box embedded installation, protection level to meet IP54 standard, can effectively dustproof and splash-proof, suitable for indoor scenes, can provide users with quality communication intercom services.

Y501-Y/Y501W-Y comes with medical handle, multiple buttons, support call, hang up, one key emergency call, more convenient.

5 Install Guide

5.1 Use POE or External Power Adapter

Y501/Y501-Y/Y501W/Y501W-Y, called as 'the device' hereafter, supports two power supply modes, power supply from external power adapter or over Ethernet (POE) complied switch.

POE power supply saves the space and cost of providing the device additional power outlet. With a POE switch, the device can be powered through a single Ethernet cable which is also used for data transmission. By attaching UPS system to POE switch, the device can keep working at power outage just like traditional PSTN telephone which is powered by the telephone line.

For users who do not have POE equipment, the traditional power adaptor should be used. If the device is connected to both POE switch and external power adapter, Y501/Y501-Y/Y501W/Y501W-Y will get power supply from POE switch in priority, and change to external power adapter once the POE power supply fails.

Please use the power adapter supplied by Fanvil and the POE switch met the specifications to ensure the device work properly.

5.2 Appendix

5.2.1 Common Command Modes

Table 1- Common command mode

Action behavior	Description		
Standby report IP	In standby mode, long press the speed dial button(Finish key) for 3		
	seconds, there will be a toot sound will 5 seconds, please press		
	the speed dial button(Finish key) once within 5 seconds, the toot		
	sound will stop automatically reporting IP		
	In the standby mode, long-press the speed dial button(Finish key)		
Switch notwork	for 3 seconds and the beep will last for 5 seconds. Within 5		
Switch network	seconds, press the speed dial button(Finish key) three times		
mode	quickly to switch to the network mode.		
	If there is no IP at present, switch to the default static IP		

(192.168.1.128).
Then switch to DHCP mode when it is the default static IP
(192.168.1.128)
When DHCP gets to IP, then do not switch and report the IP
directly.
Report the IP after the successful switch.

5.2.2 LED Status

6.3 Interface Description

On the back of the device, there is a row of terminal blocks for connecting the power supply, indoor switches, etc., the connection is as follows:

Picture 3 - Interface

Table 5 - Interface

SN	Description
1	Ethernet interface: standard RJ45 interface, 10/100M adaptive, it is
	recommended to use five or five types of network cable
2	Power interface: 12V/1A input
3	A set of RS485
4	A set of short-circuit output interfaces
(5)	A set of short-circuit input interfaces

6.4 Installation Instructions

6.4.1 Installation

- 1) Attach the installation dimension drawing to the position to be installed, open a groove of the same size according to the size, use the electric drill to punch the hole in the 2 screw holes marked, and use the hammer to drive the screw into the drilled hole(or directly into 86 boxes);
- 2) Remove the cover;
- 3) Place the bottom case into the previously opened groove and screw in the two screws with a screwdriver to secure the bottom case to the wall;Put the handle fixing base in the installation

position, and screw in two screws with a screwdriver to fix the handle base on the wall.

4) Test whether there is electricity by doing the following:

Long press Call key (the key with the serial number 2 in the <u>6.1 panel Overview</u>) for 3 seconds(after power-on for 30 seconds), and when the speaker beeps rapidly, press DSS key again quickly, the beeps stop ,the intercom will report the IP address by itself. If the work is normal, continue with the next steps.

5) Cover the cover removed in step 2;

6.4.2 Device IP Address

Method one:

- 1. Go to the official website of Fanvil [Support] >> [Download Center] >> [Tools]>> [IPScanner] module,click and download the DeviceManager,
- 2.Open the IP scan tool, the tool supports LAN scan and cross network segment scan.
- 3. For LAN scanning:
- .Click the desktop icon, run the DeviceManager tool
- 4. Cross-segment scan: Fill in the cross-segment setting in the upper right corner of the page in the format of: IP address/mask. That is: IP address/N.

Method two:

Y501&Y501W

After the device boots up (about 30s), in standby mode, press and hold the speed dial key (the key with the serial number 2 in the <u>6.1 panel Overview</u>) for 3s, release the key immediately after the speaker beeps, and then press the speed dial key quickly within 5s (the same key as the above long press), and the device starts to broadcast IP.

Y501-Y&Y501W-Y

After the device boots up (about 30s), in standby mode, press and hold the finish key (the key with the serial number 2 in the <u>6.2 panel Overview</u>) for 3s, release the key immediately after the speaker beeps, and then press the finish key quickly within 5s (the same key as the above long press), and the device starts to broadcast IP.

Method three:

Y501&Y501W

After the device boots up (about 30s), in standby mode, press and hold the speed dial key (the key with serial number 2 in <u>6.1 panel Overview</u>) for 3 seconds, release the key immediately after the speaker beeps, and then press the speed dial key three times quickly within 5s (the same key as the above long press) to complete the operation. After successfully switching to dynamic IP, the system automatically announces the IP address by voice.

Y501-Y&Y501W-Y

After the device boots up (about 30s), in standby mode, press and hold the finish key (the key with serial number 2 in <u>6.2 panel Overview</u>) for 3 seconds, release the key immediately after the speaker beeps, and then press the finish key three times quickly within 5s (the same key as the above long press) to complete the operation. After successfully switching to dynamic IP, the system automatically announces the IP address by voice.

Table 6 - Configuration instructions

Default configuration			
DHCP mode	Default enable	Static IP	192.168.1.128
Voice read IP	Long press the speed dial buttonf (Finish	Server port	80
address	Key) for 3 seconds, press the speed dial		
	button one times within 5 seconds		

6.5 WEB Configuration

When the device and your computer are successfully connected to the network, enter the IP address of the device on the browser as http://xxx.xxx.xxx/ and you can see the login interface of the web page management.

Picture 4 - WEB Login

The username and password should be correct to log in to the web page. **The default username and password are "admin"**. For the specific details of the operation of the web page, please refer to 9 Web Configurations

6.6 SIP Configurations

At least one SIP line should be configured properly to enable the telephony service. The line configuration is like a virtualized SIM card. Just like a SIM card on a mobile phone, it stores the service provider and the account information used for registration and authentication. When the device is applied with the configuration, it will register the device to the service provider with the server's address and user's authentication as stored in the configurations.

The SIP line configuration should be set via the WEB configuration page by entering the correct information such as phone number, authentication name/password, SIP server address, server port, etc. which are provided by the SIP server administrator.

WEB interface: After login into the phone page, enter [Line] >> [SIP] and select SIP1/SIP2 for configuration, click apply to complete registration after configuration, as shown below:

Picture 5 - SIP Line Configuration

6.7 Volume Setting

Set the volume (if the speaker or microphone is not connected, you can skip it)

[Settings] >> [Media Settings] >> [Media Settings], as shown below, click [Apply].

Speakerphone Volume: Set the speaker output volume.

Handfree Mic Gain: microphone volume level.

Picture 6- Volume Set

7 Basic Function

7.1 Making Calls

After setting the function key to Hot key and setting the number, press the function key to immediately call out the set number, as shown below:

Picture 7- Function Setting

See detailed configuration instructions 9.30 Function Key

7.2 Answering Calls

After setting up the automatic answer and setting up the automatic answer time, it will hear the ringing bell within the set time and automatically answer the call after timeout. Cancel automatic answering. When a call comes in, you will hear the ringing bell and will not answer the phone over time.

7.3 End of the Call

When there is a call, you can press the speed dial key or hang up the key to hang up the call, the speed dial key is set to end the call by default. See detailed configuration instructions <u>9.30</u> Function Key.

7.4 Auto Answer

The user can turn off the auto-answer function (enabled by default) on the device webpage, and the ring tone will be heard after the shutdown, and the auto-answer will not time out.

Web interface:

Enter [Line] >> [SIP], Enable auto answer and set auto answer time and click submit.

Picture 8 - WEB line enable auto answer

SIP P2P auto answering:

Enter [Line]>>[Basic settings], Enable auto answer and set auto answer time and click submit.

Picture 9- Enable auto answer for IP calls

Auto Answer Timeout (0~120)

The range can be set to 0~120s, and the call will be answered automatically when the timeout

is set.

7.5 Call Waiting

- Enable call waiting: new calls can be accepted during a call.
- Disable call waiting: new calls will be automatically rejected and a busy signal will be prompted
- Enable call waiting tone: when you receive a new call on the line, the device will beep. Users can enable/disable call waiting in the device interface and the web interface.
- Web interface: enter [Settings] >> [Features], enable/disable call waiting, enable/disable call waiting tone.

Picture 10 - Call Waiting

Picture 11 - Call Waiting tone

8 Advance Function

8.1 Intercom

The equipment can answer intercom calls automatically.

Picture 12 - WEB Intercom

Table 7- Intercom

Parameters	Description		
	When the intercom system is enabled, the device will accept		
Enable Intercom	the SIP header call-info of the Call request		
	Command automatic call		
Enable Intercom Barge	If the option is enabled, device will answer the intercom call automatically while it is in a normal call, and it will reject new intercom call if there is already one intercome call		
Enable Intercom Tone	Enable mute during intercom mode		
Enable Intercom Mute	Enable mute mode during the intercom call		

8.2 MCAST

This feature allows user to make some kind of broadcast call to people who are in multicast group. User can configure a multicast DSS Key on the phone, which allows user to send a Real Time Transport Protocol (RTP) stream to the pre-configured multicast address without involving SIP signaling. You can also configure the phone to receive an RTP stream from pre-configured

multicast listening address without involving SIP signaling. You can specify up to 10 multicast listening addresses.

Picture 13 - MCAST

Table 8- MCAST

Parameters	Description
Priority	Defines the priority in the current call, with 1 being the highest priority
	and 10 being the lowest.
Intercom Priority	The priority of the intercom call, 1 is the highest priority, 10 is the
	lowest, and the high priority can be inserted into the low priority
Enable Page Priority	Regardless of which of the two multicast groups is called in first, the
	device will receive the higher priority multicast first.
Enable Prio Chan	Once enabled, the same port and channel can only be connected.
	Channel 24 is the priority channel, higher than 1-23; A channel of 0
	indicates that no channel is used
Enable Emer Chan	When enabled, channel 25 has the highest priority
Mcast Listening Renew Time	Set the wait time to renew to the multicast

Multicast:

- Go to web page of [Function Key] >> [Function Key], select the type to multicast, set the multicast address, and select the codec.
- Click Apply.
- Set up the name, host and port of the receiving multicast on the web page of [Settings] >> [MCAST].
- Press the DSSKey of Multicast Key which you set.
- Receive end will receive multicast call and play multicast automatically.

MCAST Dynamic:

Description: send multicast configuration information through SIP notify signaling. After receiving the message, the device configures it to the system for multicast monitoring or cancels multicast monitoring in the system.

8.3 Hotspot

SIP hotspot is a simple utility. Its configuration is simple, which can realize the function of group vibration and expand thequantity of sip account. Take one device A as the SIP hotspot and the other devices (B, C) as the SIP hotspot client. When someone calls device A, devices A, B, and C will ring, and if any of them answer, the other devices will stop ringing and not be able to answer at the same time. When A B or C device is called out, it is called out with A SIP number registered with device A.

Table 9 - SIP Hotspot

Parameters	Description
Enable Hotspot	Enable or disable hotspot
Mode	This device can only be used as a client
Monitor Type	The monitoring type can be broadcast or multicast. If you want to restrict
	broadcast packets in the network, you can choose multicast. The type of
	monitoring on the server side and the client side must be the same, for
	example, when the device on the client side is selected for multicast, the
	device on the SIP hotspot server side must also be set for multicast
Monitor	The multicast address used by the client and server when the monitoring
Address	type is multicast. If broadcasting is used, this address does not need to
	be configured, and the system will communicate by default using the
	broadcast address of the device's wan port IP
Local Port	It shows the Hotspot listening port.Enter the custom hotspot
	communication port. The ports of the server and client need to be
	consistent
Name	Fill in the name of the SIP hotspot. This configuration is used to identify
	different hotspots on the network to avoid connection conflicts
Line Settings	Sets whether to enable the SIP hotspot function on the corresponding
	SIP line

Client Settings:

As a SIP hotspot client, there is no need to set up a SIP account, which is automatically acquired and configured when the device is enabled. Just change the mode to "client" and the

other options are set in the same way as the hotspot.

Picture 14 - SIP hotspot

The device is the hotspot server, and the default extension is 0. The device ACTS as a client, and the extension number is increased from 1 (the extension number can be viewed through the [SIP hotspot] page of the webpage).

Calling internal extension:

- The hotspot server and client can dial each other through the extension number before
- Extension 1 dials extension 0

9 Web Configurations

9.1 Web Page Authentication

Users can log into the device's web page to manage user device information and operate the device. Users must provide the correct user name and password to log in. If the password is entered incorrectly three times, it will be locked and can be entered again after 5 minutes.

The details are as follows:

- If an IP is logged in more than the specified number of times with a different user name, it will be locked
- If a user name logs in more than a specified number of times on a different IP, it is also locked

9.2 System >> Information

User can get the system information of the device in this page including,

- Model
- Hardware Version
- Software Version
- Uptime
- Last uptime
- MEMinfo
- System Time

And summarization of network status,

- Network Mode
- MAC Address
- IP
- Subnet Mask
- Default Gateway

Besides, summarization of SIP account status,

- SIP User
- SIP account status (Registered / Unapplied / Trying / Timeout)

9.3 System >> Account

Picture 15- WEB Account

On this page the user can change the password for the login page.

Users with administrator rights can also add or delete users, manage users, and set permissions and passwords for new users

9.4 System >> Configurations

On this page, users with administrator privileges can view, export, or import the phone configuration, or restore the phone to factory Settings.

Picture 16 - System Setting

■ Export Configurations

Right click to select target save as, that is, to download the device's configuration file, suffix ".txt". (note: profile export requires administrator privileges)

■ Import Configurations

Import the configuration file of Settings. The device will restart automatically after successful import, and the configuration will take effect after restart

■ Clear Configurations

Select the module in the configuration file to clear.

SIP: account configuration.

AUTOPROVISION: automatically upgrades the configuration

TR069:TR069 related configuration

MMI: MMI module, including authentication user information, web access protocol, etc.

DSS Key: DSS Key configuration

■ Clear Tables

Select the local data table to be cleared, all selected by default.

■ Reset Phone

The phone data will be cleared, including configuration and database tables.

9.5 System >> Upgrade

Picture 17- Upgrade

Upgrade the software version of the device, and upgrade to the new version through the webpage. After the upgrade, the device will automatically restart and update to the new version.

Click select, select the version and then click upgrade.

Upgrade the ringtone, support wav and MP3 format.

Firmware Upgrade:

Web page: Login phone web page, go to [System] >> [Upgrade].

Picture 18 - Web page firmware upgrade

Table 10- Firmware upgrade

Parameter	Description	
Upgrade server		
	Enable automatic upgrade, If there is a new version txt	
Enable Auto Upgrade	and new software firmware on the server, phone will	
	show a prompt upgrade message after Update Interval.	
Upgrade Server Address1	Set available upgrade server address.

Update Interval	Set Update Interval.	
Firmware Information		
Current Software Version	It will show Current Software Version.	
Server Firmware Version	It will show Server Firmware Version.	
	If there is a new version txt and new software firmware	
[Ungrada] button	on the server, the page will display version information	
[Upgrade] button	and upgrade button will become available; Click	
	[Upgrade] button to upgrade the new firmware.	
New version description	When there is a corresponding TXT file and version on	

information	the server side, the TXT and version information will be
	displayed under the new version description information.

- The file requested from the server is a TXT file called vendor_model_hw10.txt.Hw followed by the hardware version number, it will be written as hw10 if no difference on hardware. All Spaces in the filename are replaced by underline.
- The URL requested by the phone is HTTP:// server address/vendor_Model_hw10
 .txt: The new version and the requested file should be placed in the download directory of the HTTP server, as shown in the figure:
- TXT file format must be UTF-8
- vendor model hw10.TXT The file format is as follows:

Version=1.6.3 #Firmware

Firmware=xxx/xxx.z #URL, Relative paths are supported and absolute paths are possible, distinguished by the presence of protocol headers.

BuildTime=2018.09.11 20:00

Info=TXT|XML

Xxxxx

Xxxxx

Xxxxx

Xxxxx

 After the interval of update cycle arrives, if the server has available files and versions, the phone will prompt as shown below. Click [view] to check the version information and upgrade.

9.6 System >> Auto Provision

Webpage: Login and go to [System] >> [Auto provision].

Picture 19- Auto provision settings

Fanvil devices support SIP PnP, DHCP Options, Static provision, TR069. If all of the 4 methods are enabled, the priority from high to low as below:

PNP>DHCP>TR069> Static Provisioning

Transferring protocol: FTP、 TFTP、 HTTP、 HTTPS

Table 11- Auto Provision

Auto provision		
Parameters	Description	
Basic settings		
	Shows the current config file's version. If the version of the	
	downloaded configuration file is same with this one, the	
Current Configuration	configuration file will not be applied. If the device confirm the	
Version	configuration by the Digest method, once the configuration of	
	server is modified or the device's configurations are different from	
	server's, the device will download and apply the configurations.	
	Shows the common config file's version. If the version of the	
	downloaded configuration file is same with this one, the	
General	configuration file will not be applied. If the device confirm the	
Configuration Version	configuration by the Digest method, once the configuration of	
	server is modified or the device's configurations are different from	
	server's, the device will download and apply the configurations.	
CPE Serial Number	Serial number of the equipment	
Authentication Name	Username for configuration server. Used for FTP/HTTP/HTTPS.	

	If this is blank the phone will use anonymous	
Authentication Password	Password for configuration server. Used for FTP/HTTP/HTTPS.	
Configuration File Encryption Key	Encryption key for the configuration file	
General		
Configuration File Encryption Key	Encryption key for common configuration file	
Download Fail Ched	The default value is 5. If the download configuration fails, it will be	
Times	downloaded 5 times.	
Enable Get Digest	When the feature is enable, if the configuration of server is	
From Server	changed, phone will download and update.	
Download		
CommonConfig enabled	Set whether to enable downloading generic profiles	
Enable Server Dige	st computer digest by server before downloading	
Provision Config Priority	Provision Config Priority	
DHCP Option		
	The equipment supports configuration from Option 43, Option 66,	
Option Value	or a Custom DHCP Option. It may also be disabled.	
Custom Option Valu	Custom option number. Must be from 128 to 254.	
Enable DHCP Option	Set the SIP server address through DHCP Option 120.	
DHCPv6 Option	·	
Option Value	DHCP Option type for Auto Provisioning.	
Custom Ontion Valu	When Option Value is selected as Custom Option, you can	
Custom Option Valu	customize the value of the Option, which ranges from 128~254	
SIP Plug and Play (PnP)		
	Whether enable PnP or not. If PnP is enable, phone will send a SIP	
Enable SIP PnP	SUBSCRIBE message with broadcast method. Any server can	
Eliable SIF PNF	support the feature will respond and send a Notify with URL to	
	phone. Phone could get the configuration file with the URL.	
Server Address	Broadcast address. As default, it is 224.0.0.0.	
Server Port	PnP port	
Transport Protocol	PnP protocol, TCP or UDP.	
Update Interval	PnP message interval.	
-F		

Static Provisioning	n Server	
Static Flovisioning		
Server Address	Set FTP/TFTP/HTTP server IP address for auto update. The address	
	can be an IP address or Domain name with subdirectory.	
	The configuration file name. If it is empty, phone will request the	
Configuration File	common file and device file which is named as its MAC address.	
Name	The file name could be a common name, \$mac.cfg, \$input.cfg. The	
	file format supports CFG/TXT/XML.	
Protocol Type	Transferring protocol type, supports FTP、TFTP、HTTP and HTTPS	
Undata Interval	Configuration file update interval time. As default it is 1, means	
Update Interval	phone will check the update every 1 hour.	
	Provision Mode.	
llo data Mada	1. Disabled.	
Update Mode	2. Update after reboot.	
	3. Update after interval.	
Autoprovision Now		
TR069		
Enable TR069	Enable TR069 after selection	
Enable TR069	If TR069 is enabled, there will be a prompt tone when connecting.	
Warning Tone		
ACS Server Type	There are 2 options Serve type, common and CTC.	
ACS Server URL	ACS server address	
ACS User	ACS server username (up to is 59 character)	
ACS Password	ACS server password (up to is 59 character)	
STUN	Fatan the CTUN address	
server address	Enter the STUN address	
Enable the STUN	Enable the STUN	
TLS Version	TLS Version	
INFORM Sending	TR069 message cycle.	
Period	Valid Value:1~9999 seconds.	

9.7 System >> FDMS

Picture 20 - FDMS

Table 12- FDMS

FDMS info Settings		
Community Number	Name of equipment installation community	
Building Number	Name of equipment installation building	
Room Number	Equipment installation room name	

9.8 System >> Tools

This page gives the user the tools to solve the problem.

Picture 21 - Tools

Syslog: When enabled, set the Syslog software address, and log information of the device will be recorded in the Syslog software during operation. If there is any problem, log information can be analyzed by Fanvil technical support.

9.9 System>>Reboot

9.10 Network >> Basic

This page allows users to configure network connection types and parameters.

Note: WiFi is only supported on the Y501W & Y501W-Y

Picture 22 - Network Basic Setting

Table 13 - Network Basic Setting

Field Name	Explanation		
Net Global	Set the network global mode to Ethernet or WiFi		
Net Type	IPv4, IPv6, IPv4 and IPv6 three modes		
IPv4 Network	Status		
IP	The current IP address of the equipment		
Subnet mask	The current Subnet Mask		
Default gateway	The current Gateway IP address		
MAC	The MAC address of the equipment		
MAC Time	Distributed the stimes where the device water the NAAC address.		
stamp	Display the time when the device gets the MAC address		
Settings	Settings		
Select the app	propriate network mode. The equipment supports three network modes:		
Static IP	Network parameters must be entered manually and will not change. All parameters are provided by the ISP.		
DHCP	Network parameters are provided automatically by a DHCP server.		
PPPoE	Account and Password must be input manually. These are provided by your ISP.		
If Static IP is c	chosen, the screen below will appear. Enter values provided by the ISP.		
DHCP Hostname	Set the name that is displayed when DHCP scanning		
DNS Server Configured by	Select the Configured mode of the DNS Server.		
Primary DNS Server	Enter the server address of the Primary DNS.		
Secondary DNS Server	Enter the server address of the Secondary DNS.		

attention:

- 1) After setting the parameters, click 【Apply】 to take effect.
- 2) If you change the IP address, the webpage will no longer responds, please enter the new IP address in web browser to access the device.
- 3) If the system USES DHCP to obtain IP when device boots up, and the network address of the DHCP Server is the same as the network address of the system LAN,

then after the system obtains the DHCP IP, it will add 1 to the last bit of the network address of LAN and modify the IP address segment of the DHCP Server of LAN. If the DHCP access is reconnected to the WAN after the system is started, and the network address assigned by the DHCP server is the same as that of the LAN, then the WAN will not be able to obtain IP access to the network

9.11 Network >> WiFi

On this page, you can turn on WiFi, add WiFi information, and view the list of wireless networks

9.12 Network >> Service Port

This page provides the settings of webpage login protocol, protocol port and RTP port.

Picture 23- Service port setting interface

Table 14- Server Port

Parameter	Description
Web server type	Restart after setting takes effect. Optional web login as
	HTTP/HTTPS
Web login timeout	The default is 15 minutes, the timeout will automatically log out of
	the login page, and you need to log in again
Web page automatic	No need to enter the user name and password after the timeout,
login	it will automatically log in to the web page.
HTTP port	The default is 80, if you want system security, you can set other
	port
	Such as: 8080, web page login: HTTP://ip:8080
HTTPS port	The default is 443, same as HTTP port usage
RTP port start range	The value range is 1025-65535. The value of rtp port starts from
	the initial value set. Each time a call is made, the value of the
	voice and video ports is increased by 2
RTP port quantity	Number of calls

9.13 Network>>VPN

Picture 24- Network VPN

Virtual Private Network (VPN) is a technology to allow device to create a tunneling connection to a server and becomes part of the server's network. The network transmission of the device may be routed through the VPN server.

For some users, especially enterprise users, a VPN connection might be required to be established before activate a line registration. The device supports two VPN modes, Layer 2 Transportation Protocol (L2TP) and OpenVPN.

The VPN connection must be configured and started (or stopped) from the device web portal.

■ L2TP

NOTICE! The device only supports non-encrypted basic authentication and non-encrypted data tunneling. For users who need data encryption, please use OpenVPN instead.

To establish a L2TP connection, users should log in to the device web portal, open page [Network] -> [VPN]. In VPN Mode, check the "Enable VPN" option and select "L2TP", then fill in the L2TP server address, Authentication Username, and Authentication Password in the L2TP section. Press "Apply" then the device will try to connect to the L2TP server.

When the VPN connection established, the VPN IP Address should be displayed in the VPN

status. There may be some delay of the connection establishment. User may need to refresh the page to update the status.

Once the VPN is configured, the device will try to connect to the VPN automatically when the device boots up every time until user disable it. Sometimes, if the VPN connection does not established immediately, user may try to reboot the device and check if VPN connection established after reboot.

■ OpenVPN

To establish an OpenVPN connection, user should get the following authentication and configuration files from the OpenVPN hosting provider and name them as the following,

OpenVPN Configuration file: client.ovpn

CA Root Certification: ca.crt
Client Certification: client.crt
Client Key: client.key

User then upload these files to the device in the web page [Network] -> [VPN], Section OpenVPN Files. Then user should check "Enable VPN" and select "OpenVPN" in VPN Mode and click "Apply" to enable OpenVPN connection.

Same as L2TP connection, the connection will be established every time when system rebooted until user disable it manually.

9.14 Network >> Advanced

Picture 25 - Network Setting

Network advanced Settings are typically configured by IT administrators to improve the quality of device service.

Table 15- Network Setting

Field Name	Explanation	
LLDP Settings		
Enable LLDP	Enable or disable LLDP	
Packet Interval	LLDP Send detection cycle	
Enable Learning Function	Learn the discovered device information on the device	
QoS Settings		
Enable DSCP	Enable DSCP to get best offset QoS for voice quality.	
Signal DSCP	DSCP value for SIP messages.	
Audio DSCP	DSCP value for voice RTP data.	
ARP Cache Life	Set ARP cache life.	
DHCP VLAN Settings		
parameters values	128-254, Obtain the VLAN value through DHCP	
WAN port virtual Wan		
WAN port virtual Wan	WAN port Settings	
LAN port virtual LAN		

LAN port virtual LAN	LAN port Settings
802.1X	
Enable 802.1X	Enable or disable 802.1X
Username	Confirm Username
Password	Confirm Password
CA Certificate	CA certificate.
Device Certificate	device certificate.
Certification File	System's HTTPS server CA file.

Picture 26- SIP

Table 16 - SIP

Parameters	Description
Register Settings	
Line Status	Display the current line status at page loading. To get the up to date
	line status, user has to refresh the page manually.
Server Address	Enter the IP or FQDN address of the SIP server
Server Port	Enter the SIP server port, default is 5060
Authentication User	Enter the authentication user of the service account
Authentication Password	Enter the authentication password of the service account
Username	Enter the username of the service account.
Display Name	Enter the display name to be sent in a call request.
Activate	Whether the service of the line should be activated
Realm	Enter the SIP domain if requested by the service provider
SIP Proxy Server Address	Enter the IP or FQDN address of the SIP proxy server
Proxy Server Port	Enter the SIP proxy server port, default is 5060
Proxy User	Enter the SIP proxy user
Proxy Password	Enter the SIP proxy password
Backup Proxy Server	Enter the IP or FQDN address of the backup proxy server
Address	
Backup Proxy Server Port	Enter the backup proxy server port, default is 5060
Basic Settings	
Enable Auto Answering	Enable auto-answering, the incoming calls will be answered
	automatically after the delay time
Auto Answering Delay	Set the delay for incoming call before the system automatically
	answered it
Call Forward	Enable unconditional call forward, all incoming calls will be forwarded
Unconditional	to the number specified in the next field
Call Forward Number for	Set the number of unconditional call forward
Unconditional	
Call Forward on Busy	Enable call forward on busy, when the phone is busy, any incoming call
	will be forwarded to the number specified in the next field
Call Forward Number for	Set the number of call forward on busy
Busy	
Call Forward on No	Enable call forward on no answer, when an incoming call is not
Answer	answered within the configured delay time, the call will be forwarded to
	the number specified in the next field
Call Forward Number for	Set the number of call forward on no answer

No Answer	
Call Forward Delay for No	Set the delay time of not answered call before being forwarded
Answer	
Transfer Timeout	Set the timeout of call transfer process
Conference Type	Set the type of call conference, Local=set up call conference by the
	device itself, maximum supports two remote parties, Server=set up call
	conference by dialing to a conference room on the server
Server Conference	Set the conference room number when conference type is set to be
Number	Server
Subscribe For Voice	Enable the device to subscribe a voice message waiting notification, if
Message	enabled, the device will receive notification from the server if there is
	voice message waiting on the server
Voice Message Number	Set the number for retrieving voice message
Voice Message Subscribe	Set the interval of voice message notification subscription
Period	
Enable Hotline	Enable hotline configuration, the device will dial to the specific number
	immediately at audio channel opened by off-hook handset or turn on
	hands-free speaker or headphone
Hotline Delay	Set the delay for hotline before the system automatically dialed it
Hotline Number	Set the hotline dialing number
Dial Without Registered	Set call out by proxy without registration
Enable Missed Call Log	If enabled, the phone will save missed calls into the call history record.
DTMF Type	Set the DTMF type to be used for the line
DTMF SIP INFO Mode	Set the SIP INFO mode to send '*' and '#' or '10' and '11'
Enable DND	Enable Do-not-disturb, any incoming call to this line will be rejected
	automatically
Registration Expiration	Set the SIP expiration interval
Use VPN	Set the line to use VPN restrict route
Use STUN	Set the line to use STUN for NAT traversal
Codec Settings	Set the priority and availability of the codecs by adding or remove them
	from the list.
Advanced Settings	
Use Feature Code	When this setting is enabled, the features in this section will not be
	handled by the device itself but by the server instead. In order to
	control the enabling of the features, the device will send feature code
	to the server by dialing the number specified in each feature code field.
Enable DND	Set the feature code to dial to the server

Disable DND	Set the feature code to dial to the server
Enable Call Forward	Set the feature code to dial to the server
Unconditional	
Disable Call Forward	Set the feature code to dial to the server
Unconditional	
Enable Call Forward on	Set the feature code to dial to the server
Busy	
Disable Call Forward on	Set the feature code to dial to the server
Busy	
Enable Call Forward on	Set the feature code to dial to the server
No Answer	
Disable Call Forward on	Set the feature code to dial to the server
No Answer	
Enable Blocking	Set the feature code to dial to the server
Anonymous Call	
Disable Blocking	Set the feature code to dial to the server
Anonymous Call	
Call Waiting On Code	Set the feature code to dial to the server
Call Waiting Off Code	Set the feature code to dial to the server
Send Anonymous On	Set the feature code to dial to the server
Code	
Send Anonymous Off	Set the feature code to dial to the server
Code	
SIP Encryption	Enable SIP encryption such that SIP transmission will be encrypted
SIP Encryption Key	Set the pass phrase for SIP encryption
RTP Encryption	Enable RTP encryption such that RTP transmission will be encrypted
RTP Encryption Key	Set the pass phrase for RTP encryption
Enable Session Timer	Set the line to enable call ending by session timer refreshment. The
	call session will be ended if there is not new session timer event
0	update received after the timeout period
Session Timeout	Set the session timer timeout period
Enable BLF List	Enable/Disable BLF List
BLF List Number	BLF List allows one BLF key to monitor the status of a group. Multiple
14 411 -	BLF lists are supported.
Keep Alive Type	Set the line to use dummy UDP or SIP OPTION packet to keep NAT
	pinhole opened
Keep Alive Interval	Set the keep alive packet transmitting interval
Keep Authentication	Keep the authentication parameters from previous authentication

User Agent Set the user agent, the default is Model with Software Version. Transaction Timer T2	Configure the duration of SIP transaction timer T2
Transaction Timer T4	Configure the duration of SIP transaction timer T4
Enable TCP Transaction	Enable/Disable TCP Transaction Timer:
Timer	
SIP Global Settings	
Strict Branch	Strictly match the Branch field
Enable Group	Enable SIP group server function as server backup.
Enable RFC4475	After enabling, strictly observe RFC4475.
Enable Strict UA Match	Open a strict UA match and only accept requests from the server.
Registration Failure Retry	The registration failure retries time, if the SIP account fails to register,
Time	the chance to register half of the retransmission time is registered until
	the registration is successful.
Local SIP Port	The SIP port used by the phone.

9.16 Line >> SIP Hotspot

SIP hotspot is a simple and practical function. It is simple to configure, can realize the function of group vibration, and can expand the number of SIP accounts.

See <u>8.3 Hotspot</u> for details.

9.17 Line >> Basic Settings

STUN -Simple Traversal of UDP through NAT -A STUN server allows a phone in a private network to know its public IP and port as well as the type of NAT being used. The equipment can then use this information to register itself to a SIP server so that it can make and receive calls while in a private network.

Picture 27- Basic Settings

Picture 28 - Line Basic Setting

Table 17- Line Basic Setting

Parameters	Description
STUN Settings	
Server Address	Set the STUN server address
Server Port	Set the STUN server port, default is 3478
Binding Period	Set the STUN binding period which can be used to keep the NAT
	pinhole opened.
SIP Waiting Time	Set the timeout of STUN binding before sending SIP messages
SIP P2P Settings	
Enable Auto	Automatically answer incoming IP calls after the timeout period is
Answering	enabled
Auto Answering	Automatic answer timeout setting
Delay	
DTMF Type	Set the DTMF type of the line.

DTMF SIP INFO	Set SIP INFO mode to send '*' and '#' or '10' and '11'
Mode	

9.18 Line>>Action Plan

When calling to a phone, the bounded IP camera synchronously transmits video to the opposite phone (video support).

Log in to the device web, visit [Line] >[Action Plan], and configure action plan rules.

Picture 29 - Action Plan

Table 18 - Action Plan

Parameters	Description	
	Convert multicast: When the rule is triggered, the phone converts	
Action	incoming calls or multicast to multicast and sends them to the set	
	multicast address port.	
Number	The calling number corresponding to each Action Plan; The same	
	number expression as the dial plan is supported	
	123; 1xx; 1.; 1[3,5,7,8]xxxxxxxxx; 5753[5-6]xxxx	
	X means any bit match;	
	Indicates any bit matching;	
	[] represents a matching rule corresponding to a certain bit;	

Line	The selected rule corresponds to the matching SIP line	
	The behavior of the corresponding configuration rule is handled	
Direction	Both: trigger both incoming and outgoing calls at the same time;	
Direction	Outgoing call: Triggered when outbound calling:	
	Incoming call: triggered when inbound call;	
MCAST	C-t MOACT C-d	
Codec	Set MCAST Codec	
MCAST URL	The URL corresponding to the action plan

Туре	Set the H.264 load type	

9.22 Settings >> MCAST

It is easy and convenient to use multicast function to send notice to each member of the multicast via setting the multicast key on the device and sending multicast RTP stream to pre-configured multicast address. By configuring monitoring multicast address on the device, monitor and play the RTP stream which sent by the multicast address.

The detail for 8.2 MCAST

9.23 Settings >> Action

Table 22- Action URL

Action URL Event Settings

Set URL for the device to report its action to server. These actions are recorded and sent as xml files to the server. Sample format is http://InternalServer /FileName.xml.

(Internal Server: The IP address of server; File Name: the device's xml file used to report action.)

Picture 33- Action URL

9.24 Settings >> Time/Date

Users can configure the device's time Settings on this page.

Picture 34 - Time/Date

Table 23- Time/Date

Time/Date			
Field Name Explanation			
Network Time Se	Network Time Server Settings		
Time Synchronized	via SNTP	Enable time-sync through SNTP protocol

Time Plan Pause List	

9.26 Settings >> Tone

The user can configure the prompt tone of the device on this page.

You can select the country area or customize the area. The selected area can directly appear the default information, and the customized one can modify the key tone, callback tone and other information.

Picture 36- Tone

9.27 Setting>>Led

This page allows users to configure the light status and color of the device.

picture 37 - Led

Status light: User can customize the LED indication and color of the device in each state.

9.28Call list >> Call List

Restricted Incoming Calls

It same as blacklist. By adding a number into the blacklist, user will no longer receive phone call from that number and it will be rejected automatically by the device until user delete it from the blacklist.

User can add specific number to be blocked, or a prefix where any numbers matched the prefix will all be blocked.

■ Restrict Outgoing Call

You can set the rule to restrict some numbers from dialing out,until you remove the number from the table.

9.29 Call list >> Web Dial

Multicast

Multicast function is to deliver voice streams to configured multicast address; all equipment monitored the multicast address can receive and play the broadcasting. Using multicast functionality would make deliver voice one to multiple which are in the multicast group simply and conveniently.

The DSS Key multicast web configuration for calling party is as follow:

Picture 43- Multicast

Table 29- Web Multicast

Туре	Number	Subtype
		G.711A
	Set the host IP address and port number, they must	G.711U
	be separated by a colon (The IP address range is	G.729AB
Multicast	224.0.0.0 to 239.255.255.255, and the port number	iLBC
	is preferably set between 1024 and 65535)	opus
		G.722

PTT

Keep pressing the shortcut key set to make a call, release it and hang up

Picture 44 - Advanced Setting

9.31 Function Key >> Wireless Key

picture 45 - Wireless Key

Table 30 - Wireless Key Settings

Parameters	Description	
Index	The serial number of the added wireless button	
Name	You can set specific names for different wireless buttons	
Addr id	Unique identification id of the wireless button, the addrid of each wireless	
	button is unique (ID is displayed in hexadecimal, only numbers and letters	
	are supported, special characters are not supported)	
Туре	Select the function type of the wireless button, the functions include: Dial	
	number, Ring	
Subtype	When call is selected for Type, the subtype displays the Line selection;	
	When select ring, the subtype displays the Ringtone selection item.	
Value	When select Dial number,the subtype display of line selection;	
Pairing Status	Displays the pairing status, including pairing, pairing, and disconnecting	

Operation	To bind or disconnect the button
-----------	----------------------------------

pairing method:

Manual input addr ID method

- Login to the IP address of the device and enter the [Function key] >> [Wireless key]
 module to add a new wireless key operation
- When adding a new key, the user needs to fill in the new name, addr id (a unique identifier to distinguish different keys), type, subtype, and value (optional). After filling in, click Bind or Submit, then the device will be paired with the device with this addr id. If the status shows paired, it means the new button is successfully added.

Auto-scan addr ID method

- Log in the IP address of the device and go to [Function key] >> [Wireless key]
- Add a new key: Click Bind in the key list, and the device will enter the pairing state. Open
 the wireless key and press it. The pairing state of the device web page changes to paired
 and the addr id of the key is displayed. Indicates successful pairing.

If the pairing fails after pressing the button once, you can try to press the wireless button several times to avoid the pairing failure due to information loss

 After successful pairing, the user can fill in the name, type, subtype and value (optional) of the selected new button, and click Submit to save the settings after completion.

9.32Security >> Web Filter

Users can set up to allow only a certain network segment IP to access the device

Picture 46- WEB filter

Add and delete the allowed IP network segments; configure the start IP address in the start IP, configure the end IP address in the end IP, and then click [Add] to add successfully. You can set a large network segment or add it into several network segments. When deleting, select the starting IP of the network segment to be deleted in the list, and then click [Delete] to take effect.

Enable web filtering: configure to enable/disable web access filtering; click the [Submit] button to take effect

Note: If the device you access to the device is on the same network segment as the device, do not configure the web filtering network segment to be outside your own network segment, otherwise you will not be able to log in to the web page.

9.33 Security >> Trust Certificates

You can upload and delete uploaded trust certificates.

Picture 47 - Trust Certificates

9.34 Security >> Device Certificates

Select the default certificate or the custom certificate as the device certificate. You can upload and delete uploaded certificates.

Picture 48- Device Certificates

9.35 Security >> Firewall

Picture 49 - Firewall

Through this page, you can set whether to enable the input and output firewalls, and at the same time, you can set the input and output rules of the firewall. Use these settings to prevent

malicious network access, or restrict internal users from accessing some resources of the external network, and improve safety.

The firewall rule setting is a simple firewall module. This function supports two kinds of rules: input rules and output rules. Each rule will be assigned a serial number, and a maximum of 10 each rule can be set.

Taking into account the complexity of firewall settings, the following will illustrate with an example:

Table 31- Web Firewall

Parameter	er Description	
Enable Input Rules	whether enable Input Rules	
Enable Output Rules	Whether enable Output Rules	
input/output	Select the current rule as an input or output rule	
Deny/permit	Choose the current rule is deny or allowed;	
protocol	There are four types of protocols: TCP, UDP, ICMP, IP。	
Port range	Port range	
	The source address can be the host address, network address, or	
Src Address	all addresses 0.0.0.0; it can also be a network address similar to	
	..*.0, such as 192.168.1.0.	
	The destination address can be a specific IP address or all	
Dst Mask	addresses 0.0.0.0; it can also be a network address similar to	
	..*.0, such as 192.168.1.0.	
	It is the source address mask. When it is configured as	
Sro Bort Bongo	255.255.255.255, it means it is a specific host. When it is set as a	
Src Port Range	subnet mask of type 255.255.255.0, it means that the filter is a	
	network segment;	
	It is the destination address mask. When it is configured as	
D-4 D-+4 D	255.255.255.255, it means it is a specific host. When it is set as a	
Dst Port Range	subnet mask of 255.255.255.0 type, it means that a network	
	segment is filtered;	

After setting, click [Add], a new item will be added to the firewall output rules, as shown in the figure below:

Picture 50- Firewall rules list

Then select and click the button [Submit].

In this way, when the device runs: ping 192.168.1.118, it will not be able to send data packets to 192.168.1.118 because of the prohibition of the output rule. But ping other IPs in the 192.168.1.0 network segment can still receive the response packets from the destination host normally.

Picture 51- Delete firewall rules

Select the list you want to delete and click [Delete] to delete the selected list.

9.36 Device Log

You can crawl the device log, when you encounter unusual problems, please send the device log to the technical staff for positioning problem. For more detail 10.5 get device log.

9.37 Security Settings

Enable Tamper: after enable, when the device is removed by force, the alarm information will be sent to the server and the alarm ring will be played.

Picture 52 - Security Settings

Table 32- Security Settings

Security Settings		
Parameters	Description	
Basic Settings		
Ringtone Duration	Set the ringtone duration, default value is 5 seconds.	
	Set remote server address. The device will send message to the	
Input & Tamper	server when the alarm is triggered. The message format is :	
Server Address	Alarm_Info:Description=A10;SIP User=;Mac=0c:38:3e:3a:06:65;IP=;	
	port=Input .	
Input settings		
Input Detect	Enable or disable Input Detect	
	When choosing the low level trigger (closed trigger), detect the input	
Triagorod by	port (low level) closed trigger.	
Triggered by	When choosing the high level trigger (disconnect trigger), detect the	
	input port (high level) disconnected trigger.	
Input Duration	Set input duration	
	Send SMS: Set the alert message send to server if selected.	
Triggered Action	Dss Key: The device will perform corresponding Dss Key	
	configurations if any key is selected, by default the value is none.	
	Triggered Ringtone: Select triggered ring tone.	
Output Settings		

Output Response	Enable or disable Output Response
Triggered by DTMF	Enable of disable Output Nesponse
	Select the DTMF trigger ring tone.
Ring tone	
Triggered by URI	Select the URI trigger ring tone.
Ringtone	
Triggered By SMS	Select the SMS trigger ring tone. Select the Dsskey trigger ring tone.
Ringtone	
Triggered By Dsskey	
Ringtone	
Standard Status	When choosing the low level trigger (NO: normally open), when meet
	the trigger condition, trigger the NO port disconnected.
	When choosing the high level trigger (NC: normally close), when meet
	the trigger condition, trigger the NC port close.
Output Duration	Set the output change duration time, the default is 5 seconds.
Trigger by DTMF	Enable or disable trigger by DTMF. The device will check the received
	DTMF sent by remote device, if it matches the DTMF trigger code, the
	device will trigger corresponding output port.
DTMF Trigger Code	Input the DTMF trigger code, default value is 1234.
DTMF Reset Code	Input the DTMF reset code, default value is 4321.
December 1	Reset the output port mode by duration or state.
	By duration: Reset the output port status when output duration occurs.
Reset By	By state: Reset the output port status when device's call state
	changes.
	Enable or disable trigger by URI.
Trigger by URI	User can send commands from remote device or server to A10 series
	device, if the command is correct, then device will trigger
	corresponding output port.
Trigger Message	Input trigger message for trigger by URI mode.
Rest Message	Input reset message for trigger by URI mode.
Trigger by SMS	Enable or disable trigger by SMS.
	User can send ALERT command to A10 series device, if the command
	is correct, then device will trigger corresponding output port.
Trigger SMS	Input trigger message for trigger by SMS mode.
Reset SMS	Input reset message for trigger by SMS mode.
Trigger by Input	Select the input port, when the input port meets the trigger condition,
	the output port will be triggered (The Port level time change, By <
	Output Duration > control)
Trigger By Call state	Select call state to trigger the output port, options are:
	1 1 2 1

	Talking: When the device's talking status changes, trigger the output
	port.
	Ringing: When the device's ringing status changes, trigger the output
	port.
	Calling: When the device's calling status changes, trigger the output
	port.
Trigger By DssKey	Enable or disable trigger by dsskey. If any of the dsskey is selected,
	when the dsskey application performs, the output port will be
	triggered.

10 Trouble Shooting

When the device is not working properly, users can try the following methods to restore the device to normal operation or collect relevant information to send a problem report to the Fanvil technical support mailbox.

10.1 Get Device System Information

Users can obtain information through the [**System**] >> [**Information**] option on the device webpage. The following information will be provided:

Device information (model, software and hardware version) and Internet Information etc.

10.2 Reboot Device

User can restart the device through the webpage, click [System] >> [Reboot Phone] and click [Reboot] button, or directly unplug the power to restart the device.

When the device has problems and user can't access the web page, you can disassemble the surface shell and press the "RESET" button. The device will restart and the configuration will not change.

10.3 Device Factory Reset

Restoring the factory settings will delete all configurations, database and configuration files on the device and the device will be restored to factory default state.

To restore the factory settings, please go to [System] >> [Configuration] >> [Reset Phone] page, and click [Reset] button, the device will return to the factory default state.

10.4 Network Packets Capture

In order to obtain the data packet of the device, the user needs to log in to the webpage of the device, open the webpage [System] >> [Tools], and click the [Start] option in the "Network Packets Capture". A message will pop up asking the user to save the captured file. At this time, the user can perform related operations, such as starting/deactivating the line or making a call, and clicking the [Stop] button on the webpage after completion. Network packets during the device are saved in a file. Users can analyze the packet or send it to the Fanvil Technical Support mailbox.

10.5 Get Device Log

Log information is helpful when encountering abnormal problems. In order to obtain the log information of the device, the user can log on to the device web page, open the web page [device log], click the "start" button, follow the steps of the problem until the problem appears, and then click the "end" button, "save" to the local for analysis or send the log to the technician to locate the problem.

10.6 Common Trouble Cases

Table 25 - Trouble Cases

Trouble Case	Solution
Device could not boot up	The device is powered by external power supply via power
	adapter or POE switch. Please use standard power adapter provided
	or POE switch met with the specification requirements and check if
	device is well connected to power source.
	2. If the device enters "POST mode" (Solid orange), the device
	system is damaged. Please contact your location technical support to
	help you restore your equipment system.
Device could not register to a	Please check if the device is connected to the network.
service provider	2. If the network connection is good, please check your line
	configuration again. If all configurations are correct, contact your
	service provider for support, or follow the instructions in "10.4 Network
	Data Capture" to obtain a registered network packet and send it to the
	Fanvil Support Email to help analyze the issue.
