Profitable, flexible, upgradeable.
The ultimate payphone network
The next generation of voice terminals

The X2Connect NET200 Payphone Range

The X2Connect NET200 payphone range empowers operators, enabling optimal configuration and in-service availability of their payphone network through a scaleable solution that offers innovative revenue features.

The X2Connect NET200, for use in all environments, is part of a flexible family of terminals offering a progression of features ranging from basic telephony terminals and products supporting data communications through to full multimedia platforms. The range builds on the considerable success of the X2Connect Sapphire payphone by taking its durable, modular design philosophy to create new and stylish models using 21st century technology.

Focus on X2Connect NET200

As a line-powered voice telephony product, the X2Connect NET200 benefits greatly from its striking modern appearance. Research indicates that users are intrigued and attracted by the contemporary design that nevertheless still looks like a payphone. This means that revenues are not threatened and usage is actually encouraged by the single coin and card-entry slots in coin-only, card only or all-payment options, together with the choice of display and additional key functions.

Built-in Excellence

The outstanding design of the X2Connect NET200 is reflected in its ease of installation and levels of operational efficiency, together with superb reliability. Cost of ownership is critical to a profitable payphone business. Reliability particularly that of the payment mechanisms, is essential. X2Connect's coin handling expertise is world-renowned and our specially designed card reader features a full slot shutter and excellent debris and half-card flushing. The worst of the weather will not affect the X2Connect NET200 which is designed to withstand the harshest outdoor environment.

Security

Where security is concerned, X2Connect provides industry-leading solutions to prevent and deter vandalism, theft and fraud. Multiple security options are available including a choice of cash compartments, locks, anti-stuffing features, cash container tracking and the latest cryptographic card payment and e-purse schemes.

X2Connect NET200 Benefits

- Competitive price
- Flexibility through interchangeable network interfaces
- Maximises revenue by attracting users and providing additional services
- High security and fraud resistance
- High reliability
- Low cost of ownership
- Easy to use and maintain
- Flexible user payment options
- Simple hardware and software upgrade paths

The Role of X2Connect NETms

Optimising operational efficiency has another vital dimension: the part played by X2Connect's own remote management system, X2Connect NETms. This Windows 2000-based system currently deployed by dozens of leading operators around the world can be used with X2Connect's complete product portfolio. Several new services have been developed to complement the new X2Connect NET range. Also, because X2Connect NETms can now 'interrogate' a suspect terminal, a potentially expensive visit to that terminal can be avoided.

Network Interfaces

Depending on their specific needs, operators have a choice of cost-effective and fully embedded network interfaces. At present, these include analogue PSTN, ISDN, GSM and CDMA. Adapting to another network type is simply a case of replacing a single module.

Upgrades

The X2Connect NET200 flexible modular architecture is impressive for upgrading at minimal cost, thereby extending its profitable life span. Hardware upgrades are available from card only to all-payment terminals. Software upgrades are easily implemented using X2Connect's unique, reliable code download service. A module upgrade enables the X2Connect NET200 units to be converted to X2Connect NET300. The X2Connect NET300 provides a larger display for information services or text messaging.

X2Connect NET200 Features

- Superb styling
- Range of colour options
- Line powered in most configurations
- Line powered backlight on text display
- Optional graphics display
- Enhanced graphical user interface
- Choice of network interface options, ISDN, PSTN, GSM and CDMA
- Dual terminal operation on ISDN
- Eight facility keys with flexible assignments
- Electronic validation of 16 coin types
- 8 coin store with best change facility
- Single coin slot for all coins
- Single card slot for all cards, with debris clearing and full width passive shutter
- Multi-function card reader, EEPROM, Eurochip, e-purse and credit cards
- Multiple security options including choice of cash compartments, locks, anti-stuffing features and cash container tracking
- Managed service via a central remote Management system, X2Connect NETms
- Remote coin set, functional software and data upgrades
- Part of a family range of terminals offering voice telephony and data services up to full Internet access
