

VPD4R2 - 4 Channel ISDN2

VPA4A - Analogue 4 Channel

Voice recording, logging and monitoring, with unlimited offsite storage capacity via internet.

Inbound & outbound calls are automatically recorded and uploaded to Voiceproof servers removing the need for onsite backups. Stored calls are then accessible from any internet PC with a Voiceproof secure certificate. An end user subscription is required.

Key Features

- Instant Offsite Storage**
 On completion of the call, it is time stamped, encrypted and securely uploaded to the server. This protects against loss of data due to hardware failures, missed backups, or theft.
- Lifetime Warranty**
 End users benefit from a hardware warranty for the duration of their subscription with Voiceproof.
- Auto Call Logging**
 Call data can be searched by date, time and telephone number. Multiple sites can be accessed and monitored from one PC.
- Personalised Announcement**
 Record your own message to let callers know they are being recorded - there is also an audible signal that can be enabled.
- VOIP & SIP Compatible**
 Future-proofed hardware allows firmware updates to be installed remotely.
- Simple Installation**
 For a 4 channel ISDN2 box you would typically have only 6 connections to make, 1 x power cable, 4 x phone lines (IN/OUT), 1 x broadband RJ45.

Voiceproof Servers

- All data stored is tamperproof
- Servers backup to one another
- Unlimited storage capacity
- Secure 24 hour web access
- Certificates ensure access control
