

ip700wifi

Wi-Fi phone for VoIP

-  low-cost, worldwide calling
-  wireless freedom and mobility
-  ideal for business, home & travel

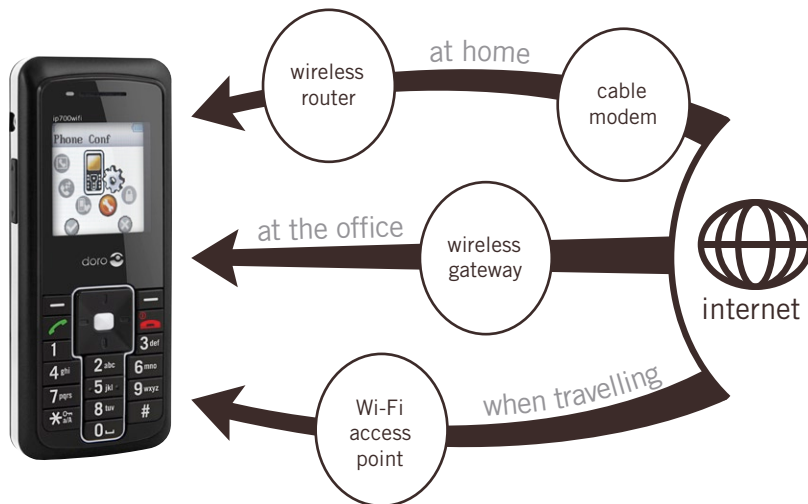

The slim and lightweight ip700wifi is a stylishly designed wireless phone for low-cost VoIP telephony. It allows businesses and households to achieve significant savings by making and receiving calls at a fraction of the cost of GSM and other local and long distance phone services.

Ideal wherever access to wireless internet is available, ip700wifi is perfect for the home and office. It can also be used at public venues across the globe such as hotels and resorts, airports, train stations, restaurants, internet cafés, school campuses, commercial centres and other Wi-Fi hotspots.

ip700wifi

Smart business solution

ip700wifi is an excellent solution for small and medium-sized businesses. Internal calls are handled with standard PBX functions including Call Forward, Call Waiting and Speed Dial. In addition, companies with offices in more than one location can easily set up communications to appear as if originating from the same geographical site. For example, employees working abroad can receive and place calls as if they were actually situated at the head office, completely transparent to the customer. Configuration is handled effortlessly through a WEB interface.

SIP for today and tomorrow

Based on SIP 2.0, ip700wifi represents the very latest in internet communication technology. With the SIP standard recognised as the leading protocol for the delivery of data, multimedia and voice over IP, ip700wifi is a safe investment guaranteed to provide a long-term, low-cost and universal solution. And with support for multiple SIP accounts, users can carry both their business extension and private numbers in the same phone. This allows them to place calls from, or answer calls made to either number as if still at the office or at home – even when half way around the world.

Secure and convenient

ip700wifi with Ad-Hoc mode is fully compliant with IEEE 802.11b for fast, reliable and encrypted communication in WLAN / Wi-Fi networks. Auto logon WLAN on pre-set priority, One-touch Site Survey and multiple WLAN configuration storage have all been incorporated to enhance the phone's functionality. In addition, access point call hand-over is seamless within the same SSID. The result is a phone that provides not only low-cost VoIP telephony, but also the freedom and convenience of wireless communication.

All the features one expects

In addition to its handsomely slim and lightweight design, ip700wifi offers a full range of features including backlit, colour display, vibrating alert, adjustable ringer, over 15 selectable languages and a 100 position phonebook. Top sound quality is provided through Comfort Noise Generation, Voice Activity Detection and Echo Cancellation. Furthermore, ip700wifi is exceptionally simple to set up. Even the software is easily updated via Wi-Fi.
