

Our flagship model offers many of the features associated with a fully functional system phone, starting with Call Line Identity (CLI) to allow both name and number of caller to be displayed. Great for allowing you to gather your thoughts and paperwork, before answering that customer call, projecting the best possible image of you and your company.

The **atl** Berkshire 800 also offers a directory for storage of 100 name and number locations. No longer do you need to save details on bits of paper, put them where you need them most.

The provision of additional memory allows us to offer a list of the last 50 callers, this list includes the time and date of these calls to help with any historic reporting or past number retrieval. If however, all you require is a simple redial feature, the **atl** Berkshire 800 also makes the most of this, with a permanent back-up list of the last five callers.
